 Three hours

අමතර කියවීම් කාලය - මිනිත්තු 10 යි
 மேலதிக வாசிப்பு நேரம் - 10 நிமிடங்கள்
 Additional Reading Time - 10 minutes

Use additional reading time to go through the question paper, select the questions you will answer and decide which of them you will prioritise.

Design and Construction Technology I

Note :

- Answer all questions.
- In each of the questions 1 to 40, pick one of the alternatives (1), (2), (3), (4) which is correct or most appropriate.
- Mark a cross (X) on the number corresponding to your choice in the answer sheet provided.
- Further instructions are given on the back of the answer sheet. Follow them carefully.

1. When the sides of the triangle shown in the figure are unfolded to form a straight line, the total length of it is

- 105cm.
- 117cm.
- 138cm.
- 180cm.

2. The diagonals of the shown square are joined. The number of right angled triangles formed is

- 2.
- 4.
- 6.
- 8.

3. "The locus of a point travelling at a uniform distance to a centre point is a circle." The most appropriate example to demonstrate this is

- A tyre revolving due to push.
- the revolving axis of a motor.
- The path of a bull tied to a sekku.
- The bucket and rope connected to a pulley of a well.

4. The internal angle of a regular polygon is 108° . What is the name of this polygon?

- Regular Pentagon
- Regular Hexagon
- Regular Heptagon
- Regular Octagon

5. A thick A4 paper was folded to join the two wide ends **without** any additional activity. It will then form

- (1) a part of A5 size.
- (2) an irregular solid.
- (3) a hollow cylinder.
- (4) a hollow pyramid.

6. Figure shows the sketch drawn by following geometric methods in order to construct any regular polygon when base is given.

The values of angles x° and y° respectively are

- (1) 30° and 60° .
- (2) 30° and 45° .
- (3) 45° and 60° .
- (4) 45° and 75° .

20. In concreting a construction structure the concrete is laid in pre prepared form work where reinforcement is already placed. Concreting in this method is called
 (1) depositing. (2) compacting. (3) curing. (4) filling.

21. In the production of concrete two types of aggregates are used in addition to the binding material. What are the two types of aggregates?

- (1) graded aggregates and coarse aggregates
- (2) graded aggregates and fine aggregates
- (3) fine aggregates and coarse aggregates
- (4) fine aggregates and irregular aggregates

22. What is the pipe fitting required for obtaining a 20mm branch supply to a intermediate point from diameter of 32mm PVC pipe?

- (1) Socket (2) Reducing T
- (3) Reducing bend (4) Bend

23. Figure shows centre line setting out drawn to form a right angle corner in construction buildings.

$A : B : C$ are proportional to

- (1) 1 : 2 : 3. (2) 3 : 4 : 5. (3) 3 : 2 : 1. (4) 5 : 4 : 3.

24. 'Rubble' is used for

- (1) construction of stretcher bond walls. (2) construction of Random rubble work.
- (3) Reinforced concrete. (4) Plain concrete.

25. The load on a building imposed by roof and ceiling etc. is called

- (1) Live load. (2) Dead load.
- (3) Environmental load. (4) Timber load.

26. In fitting a door sash, if a long bar cramp is not available it could be performed by

- (1) Moulding. (2) Rebating.
- (3) Grooving. (4) Dowelling.

27. What is the timber that require most effort for timber sawing?

- (1) Satin (2) Sandal
- (3) Iron wood (Na) (4) Milla

28. The property considered in classification of tools and equipment is,

- (1) Use (2) Production quality
- (3) Efficiency (4) Brand name

29. What is the name of the timber Joint shown in the figure?

- (1) Closed housing Joint.
- (2) Stopped housing Joint.
- (3) Through housing Joint.
- (4) Dovetail housing Joint.

30. Which of the following is an environmental load?

- (1) Wall plates of roof
- (2) People living in the house
- (3) Corrosion
- (4) Snowing

31. Select the choice which has only wood finishing tools/equipments.

- (1) Smoothing plane, rasp, scraper, sand paper
- (2) Trying plane, half round file, scraper, sand paper
- (3) Spoke shave, rasp, half round file, scraper
- (4) Rebate plane, scraper, sand paper, rasp

32. The first thing that a technician getting ready to make a timber item should do is

- (1) providing necessary timber.
- (2) sharpening necessary tools.
- (3) deciding selling price.
- (4) preparing technical drawing.

33. What is the timber defect caused by effect of blowing wind?

- (1) Cup shake
- (2) Twist
- (3) Knots
- (4) Star shake

34. What is the most suitable timber joint used for making a window sash?

- (1) Dovetail Joint
- (2) Rebate Joint
- (3) Mortice and tenon Joint with rebate
- (4) Half lap Joint

35. What is the main difference between a rip saw and a cross cut saw?

- (1) shape of the saw handle
- (2) shape of saw teeth
- (3) Number of teeth per inch
- (4) length of the saw blade

36. The main factor which decide the shape of a roof is

- (1) location of the building.
- (2) number of slopes. (sides)
- (3) roofing material.
- (4) material used for walls.

37. Sequential order of planeing a plank is planing the

- (1) edge, surface, width, thickness.
- (2) surface, width, edge, thickness.
- (3) width, thickness, surface, edge.
- (4) surface, edge, thickness, width.

38. What is the filling agent out of the following?

- (1) Varnish
- (2) Sanding sealer
- (3) Enamel paint
- (4) Wood Finish

39. In setting out an alligator Jaw scarf Joint its Length is decided as

- (1) three times the width of beam.
- (2) three times the height of beam.
- (3) length of joining members.
- (4) location of the joint.

40. What is the first plane used for planing timber?

- (1) Smoothing Plane
- (2) Jack Plane
- (3) Rebate Plane
- (4) Trying plane

Design and Construction Technology II

- * Answer five questions selecting the first question and four others.
- * Question No.1 carries 20 marks and each of the other questions carry 10 marks each.

1. (i) Isometric view of an object is shown in the figure.

(All dimensions are in millimetres.)

According to the isometric figure given above, draw

Front, elevation seen through direction of arrow *A*,

Side, elevation seen through direction of arrow *B*,

Plan, seen through direction of arrow *C*,

using third angle orthographic projection principles to a scale of 1:1 as per the dimensions.

(ii) Draw a circle of radius 30 mm and divide the circumference into five equal parts. Construction lines should be clearly shown.

2. Brick walls are widely used in the construction industry.
 - (i) Mention the standard dimensions of a brick according to Sri Lanka Standards.
 - (ii) Briefly describe **two** characteristic features that could be observed in the front elevation of Stretcher Bond.
 - (iii) Draw the front elevation of a wall built in English Bond and name the following parts.
 - a. Over lap
 - b. Horizontal joints
 - c. Plumb joints
3. Plumbing can be performed efficiently and accurately as various accessories for PVC pipes are easily available.
 - (i) Mention the accessory fixed to lower end of suction pipe in pumping water from a well.
 - (ii) Mention **four** advantages of using PVC pipes over Galvanized Iron (G.I.) pipes.
 - (iii) Write one occasion each for the usage of following plumbing accessories in laying pipes.
 1. Socket
 2. Reducing Socket
 3. Faucet Socket
 4. T Socket
 5. Bend
4. Various types of Joints are used to connect timber parts together. The timber joints are classified according to their use.
 - (i) Name **two** types of lengthening joints.
 - (ii) Name **two** types of dovetailed joints and mention **two** common characteristics of them.
 - (iii) Name a type of widening joint which is used to increase the width and draw its sketch.
5. Aluminium fabrication can be identified as a developmental change in construction industry.
 - (i) Mention **two** advantages of aluminium over timber.
 - (ii) Describe briefly **two** assembling methods in aluminium fabrication.
 - (iii) Mention **three** tools or equipment used in aluminium fabrication and briefly describe one function each of them separately.
6. Proper finishing to a timber product gives it good appearance as well as preservation.
 - (i) Mention **two** laminates used for plywood and Mild density fibre (M.D.F) board.
 - (ii) Mention **four** colouring agents used to colour timber.
 - (iii) Describe briefly the sequential steps followed in finishing a timber product.
7. A brick wall 4 m long, 2 m high and one brick thick bond is to be built in English Bond. Calculate the expenditure for bricks to build the above wall including wastage and transport of bricks using following information.
 - 120 bricks are required to build one square metre of one brick thick wall.
 - Wastage in transport and usage of bricks is 5%.
 - Cost of 1000 bricks (including loading, unloading and transport) is Rs. 2500.00.
